

Sirs, I wish to express my support for RM-10352 in its entirety, except for the demarcation frequency of 1843.0 Khz. In my opinion the frequencies from 1800 to 1840 should be more than sufficient for the digital modes, primarily cw. 1840 Khz has been for years the unofficial dividing line between cw and ssb users and I for one would like to see it remain. All other changes sought are for the improvement of operations on the 160 meter amateur band.

Respectfully, Kenneth H. Moore, Jr callsign KK4CA ex K4FKO with over 42 years as a radio amateur.
